# Act Report

These are the insights and visualizations that I came up with from the final data set after wrangling, hopefully it will be useful for the account manger of we love 🐶's to gain more interactions or as stepping stone to make an automatic bot the tweets the cutest dogs there is to maximize interactions with the account.

After the top 10 breeds by number of favorites (likes) it turns out that the Saluki is most liked one, check the cutest below 😎

The fig. below shows that different age groups of dogs the number of interactions and this reflects that dogs in the puppo= puppy phase are the most adorable as doggo-puppo & puppo has the highest interactions and they both represents this age group, and I really could not blame the them we all love dogs but puppies will always have there match share of love.

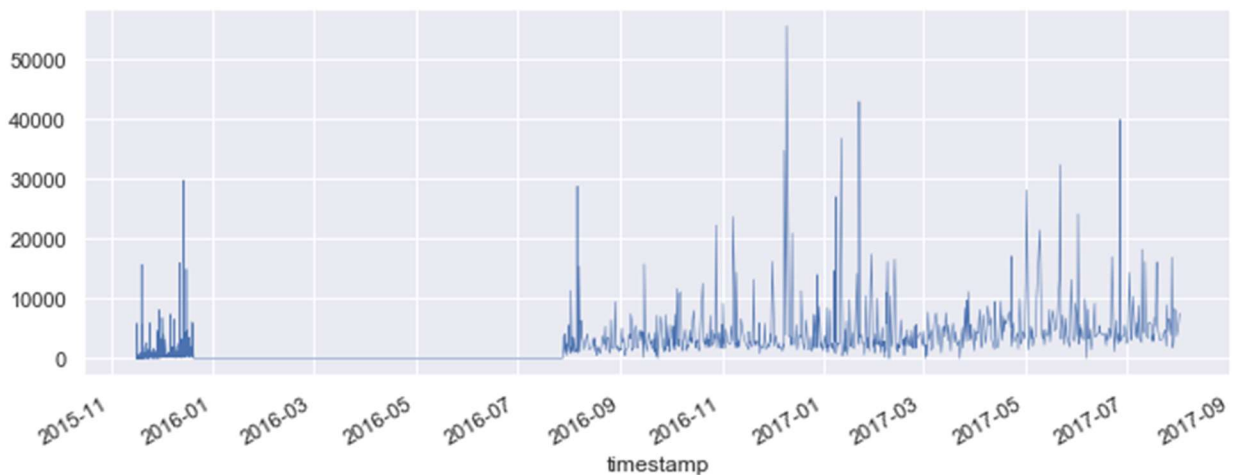

After preforming Time series analysis on the interactions with the we love dog account I came up with hypotheses that prior to the trend of (They're Good Dogs Brent) on Feb. 2017(https://knowyourmeme.com/memes/theyre-good-dogs-brent)
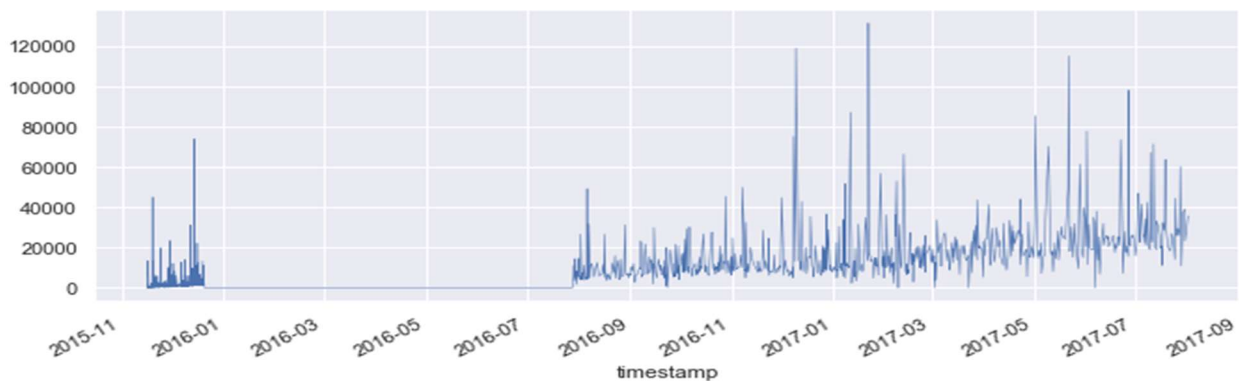

they had the most retweets which made the noticeable and then after being famous because of this trend they got to the peak of their likes in this period as a result of being famous, then it had a dramatic decree in the number of retweets

but somehow the exiting followers maintained interacting with the page through liking the tweets.
